

Pesticide path from fields to rivers

Marek Liška¹, Jakub Dobiáš¹, Milan Koželuh¹, Petr Fučík²,
Antonín Zajíček²

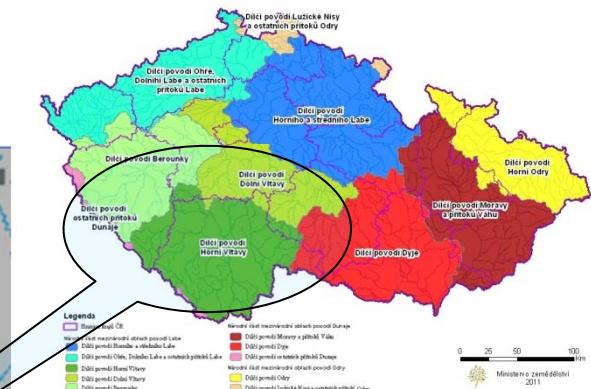

¹*Povodí Vltavy, State Enterprise*

²*Research Institute for Soil and Water Conservation*

Where we are?

Vltava river basin Vltava river board

Catchment area
28 708 km²
23000 km of rivers
111 reservoirs
31 main reservoirs
343 weirs
19 power plants
3 laboratories

Povodí VLTAVY

Povodí Vltavy: Laboratories in Pilsen

2 instruments:LC – MS/MS (liquid chromatography with mass detection)
Portfolio pesticides + metabolites (cca 240 compounds)
pharmaceutical compounds (cca 80 + 5metabolites)
MUSK compounds + other PCPs

The common measured pesticides in water Vltava river catchment *surface, underground and drainage water*

1. Nitrate pesticides:

- terbutylazin and metabolites (ESA, OA)
- acetochlor and metabolites (ESA, OA)
- metolachlor and metabolites (ESA, OA)
- atrazin desethyl
- metazachlor and metabolites (ESA, OA)
- Dimethachlor and metabolites (ESA, OA)
- alachlor ESA
- metamitron
- metribuzin
- mancozeb
- propiconazol
- tebuconazol
- Hexazinon
- chloridazon and metabolites

2. Uronic acid pesticides:

- diuron
- isoproturon
- chlorotoluron
- linuron
- nicosulfuron

3. Total herbicides

- glyphosate
- AMPA

4. Insecticides:

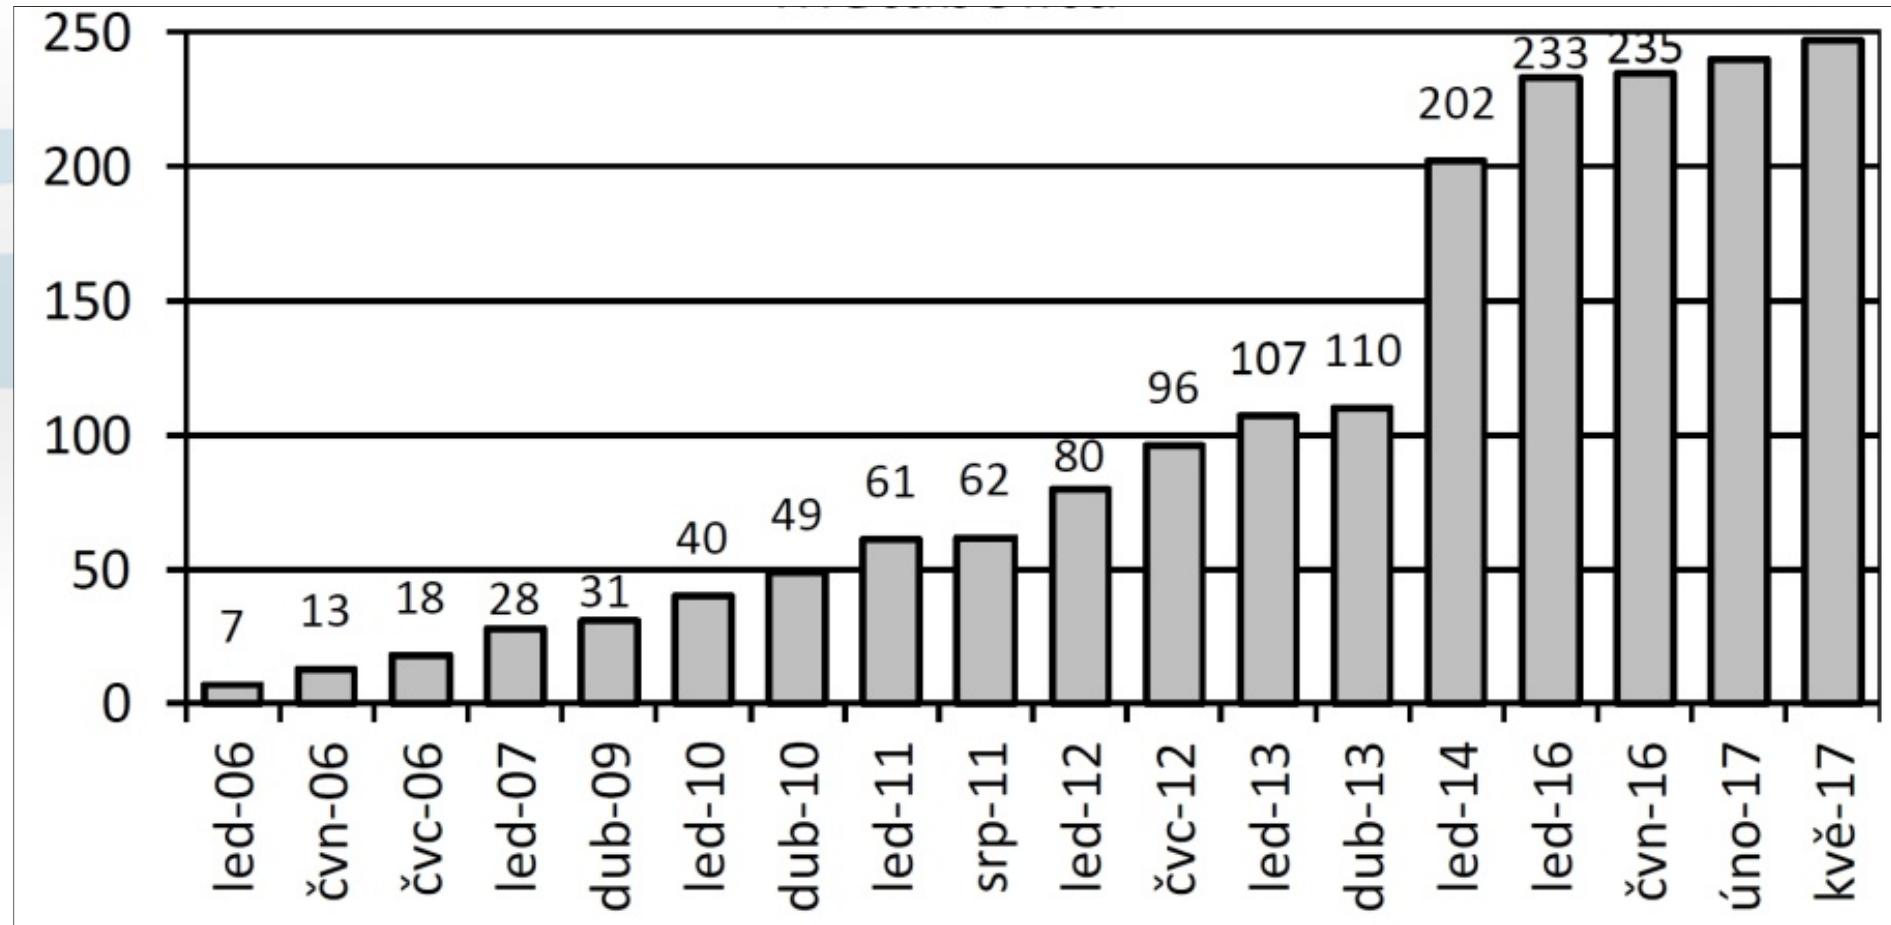

- DEET

POVODÍ VLتAVY

Number of analysed pesticides in Vltava river board laboratories in years 2006-2017

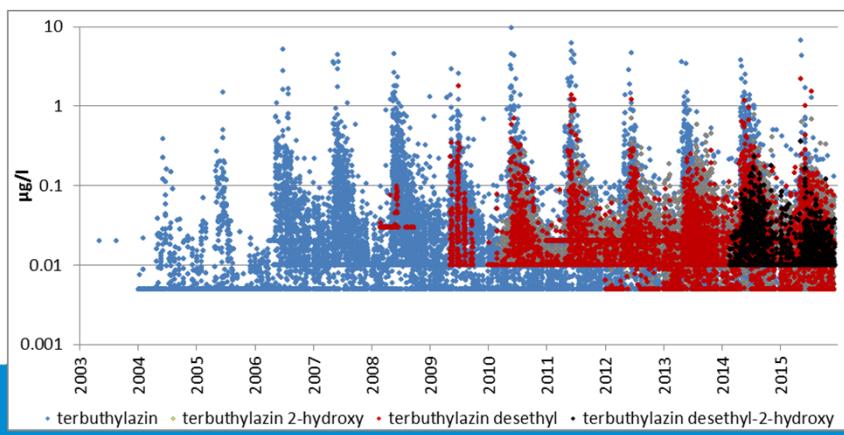

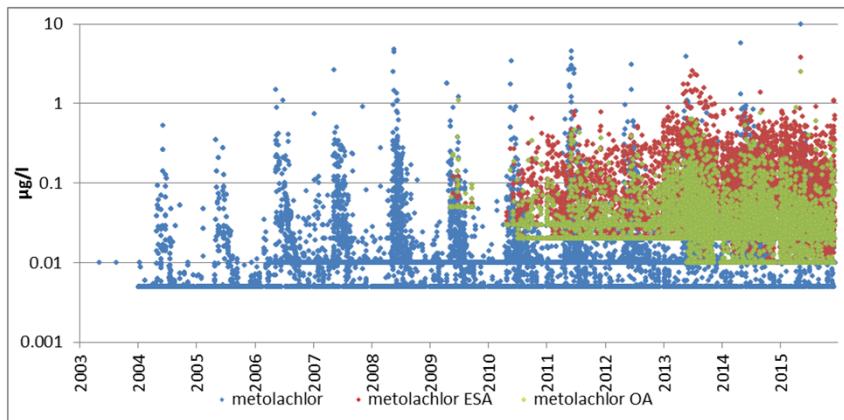

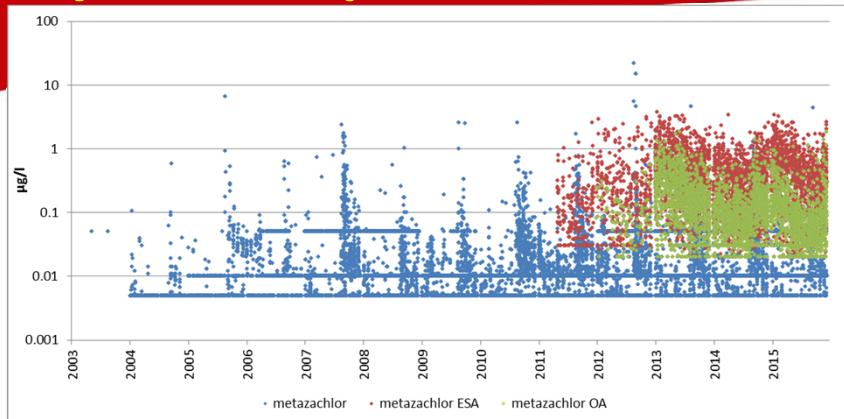

What influences the occurrence of pesticides in surface water?

The concentration and dynamic of pesticides is influenced by the following:

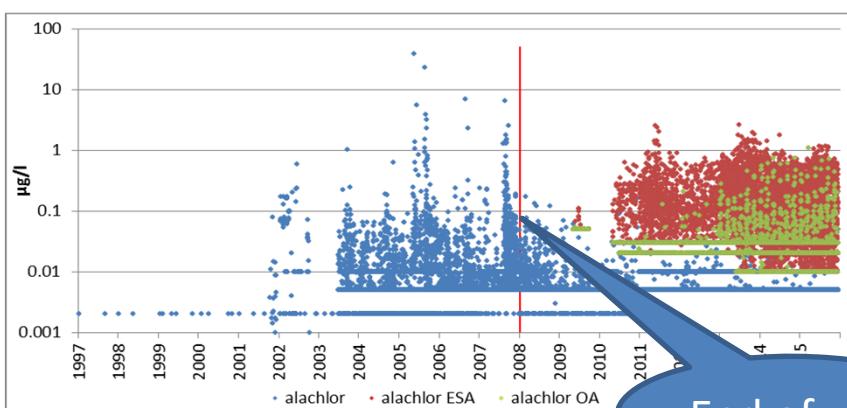

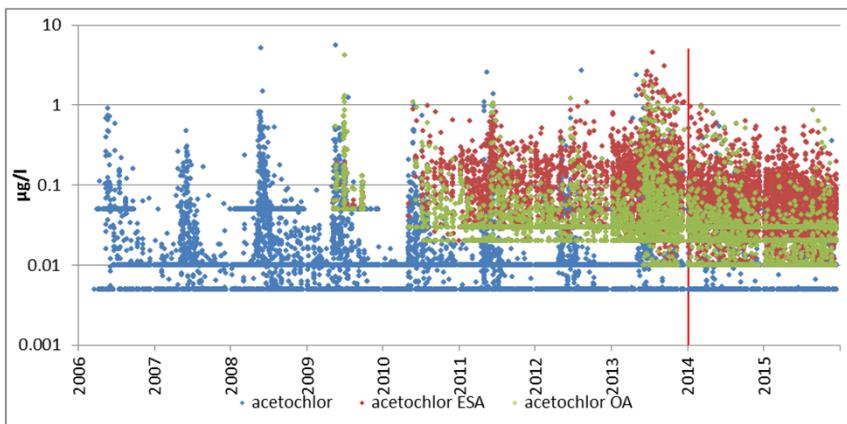

- 1) Manner and extent of application**
- 2) Type of soil, current in the soil, fissures in the soil**
- 3) Existence and functionality of drainage systems**
- 3) Precipitation**
- 4) Dissolvability in the water, persistence, half-time**

- In the world there are more than 800 effective substances registered**
- In the Czech Republic there are 250 substances – registered in database (**ÚKZÚZ**)**

Dynamic of pesticides concentrations in surface water CZ

parent compounds and metabolites

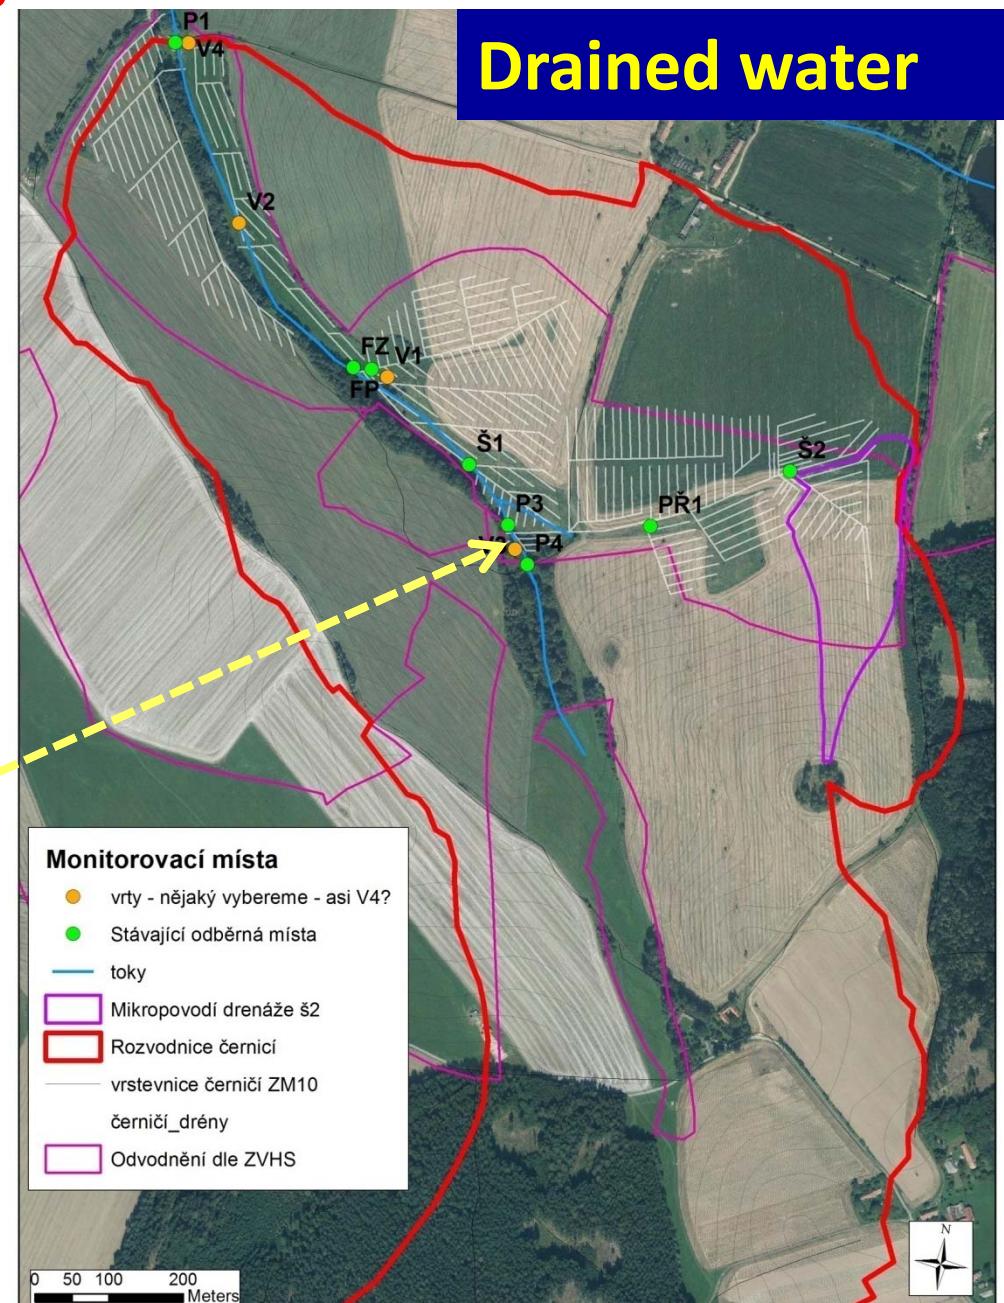

Kodeš: Aktuální výsledky celostátního monitoringu pesticidů v podzemních vodách, ČHMU, 2017

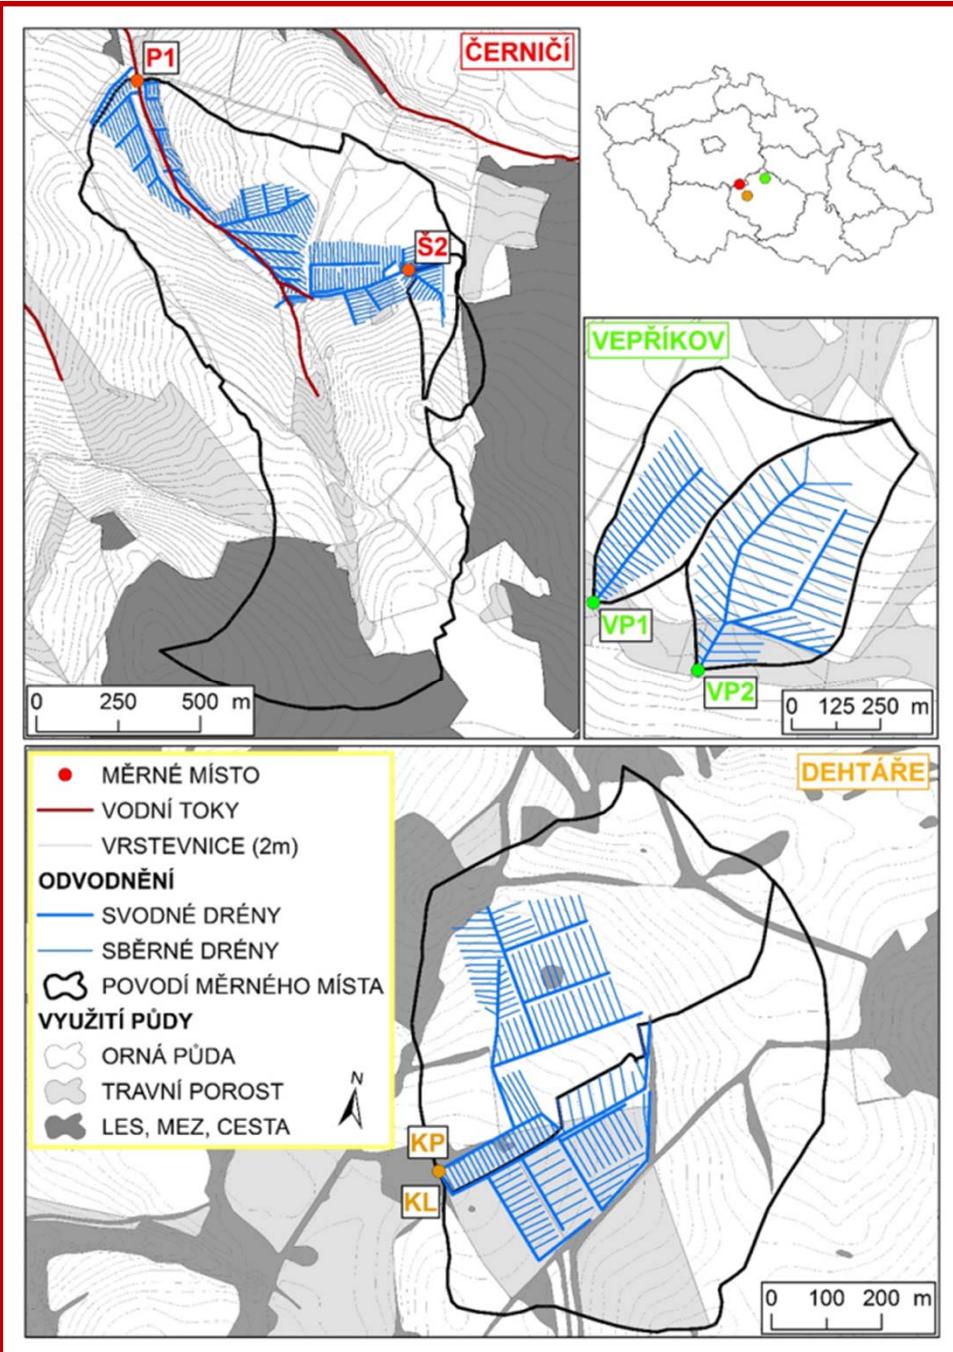

„Studying the causation and concentration dynamics of pesticide burdens in small water courses“

project TAČR TA04021527:

Drained fields = point source of pesticides for surface water

Experimental catchments of RISWC/VUMOP

Černičí 1,38 km²

Š2 – drainage group, subcatchment area 3,8 ha, $Q_{avg} = 0,26$ l/s

Arable land - grains, potatoes, rape, corn

P1 – surface runoff, arable land, grass, forests

subcatchment area 1,4 km², $Q_{avg} = 5,4$ l/s

Vepříkov 48,2 ha

VP1 19,95 ha, drained 8,7 ha;

$Q_{avg} = 0,57$ l/s

VP2 28,25 ha, drained 21,3 ha;

$Q_{avg} = 0,71$ l/s

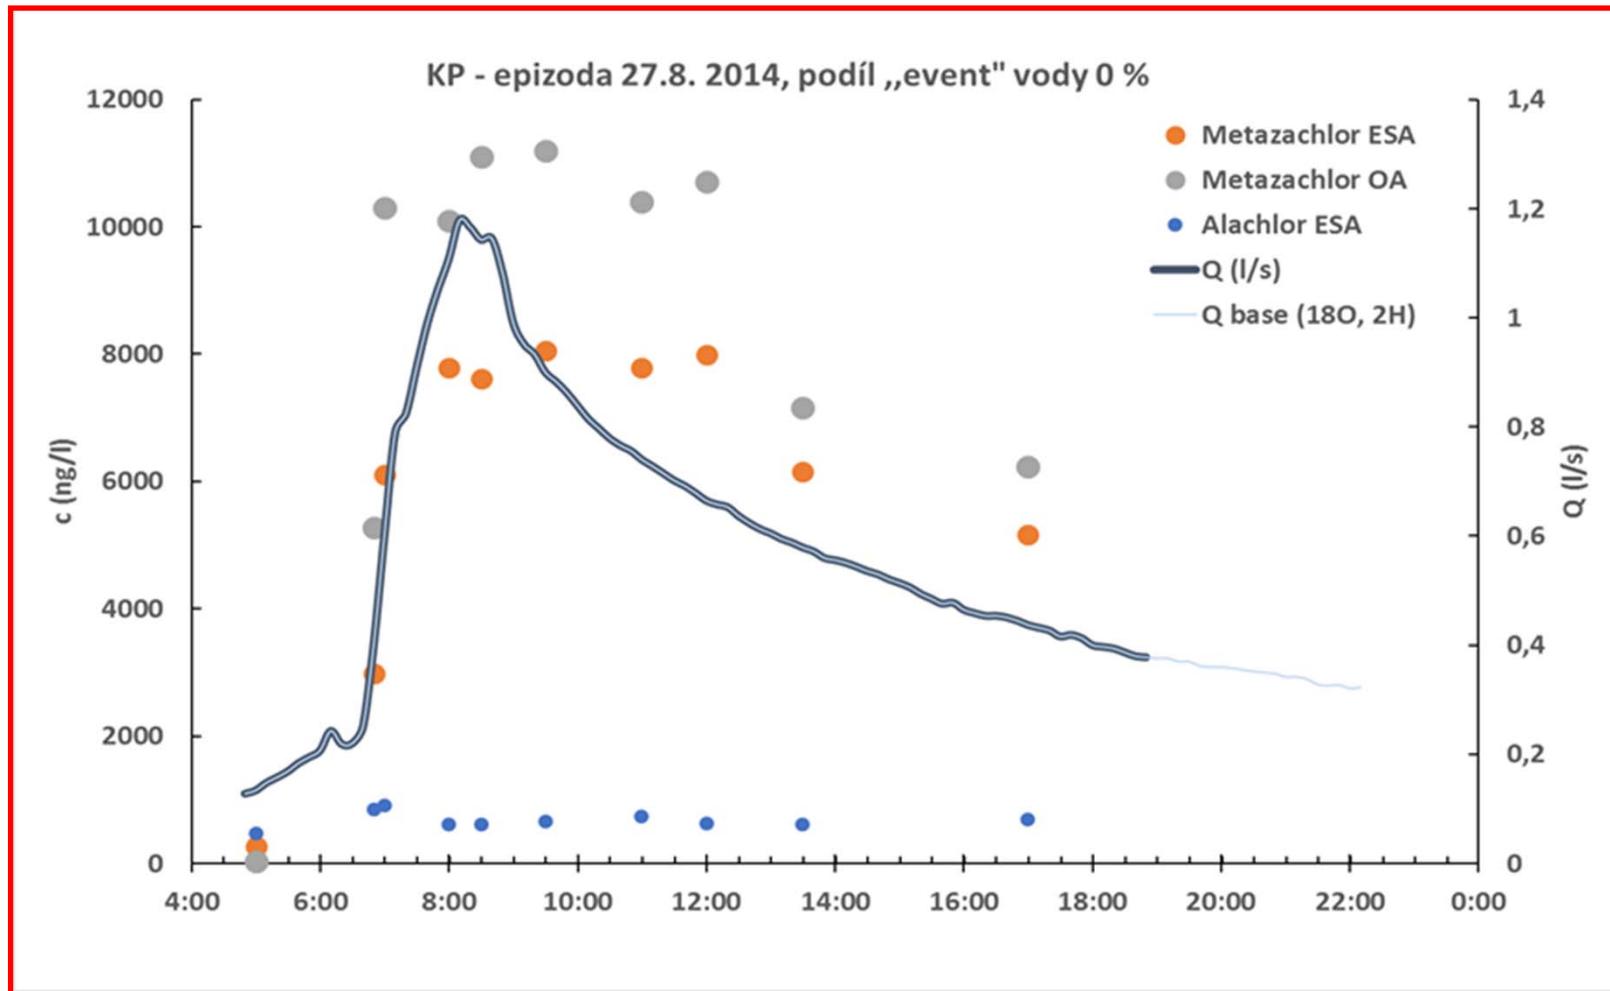

Arable land, corn for biogas station

Dehtáře 58 ha, 19 ha drained

KL (29,6 ha) grass

KP (28,3 ha) arable land - grains, potatoes, rape, corn

Dehtáře experimental catchment: rainfall/runoff events dynamics of metabolites in drainage outflow

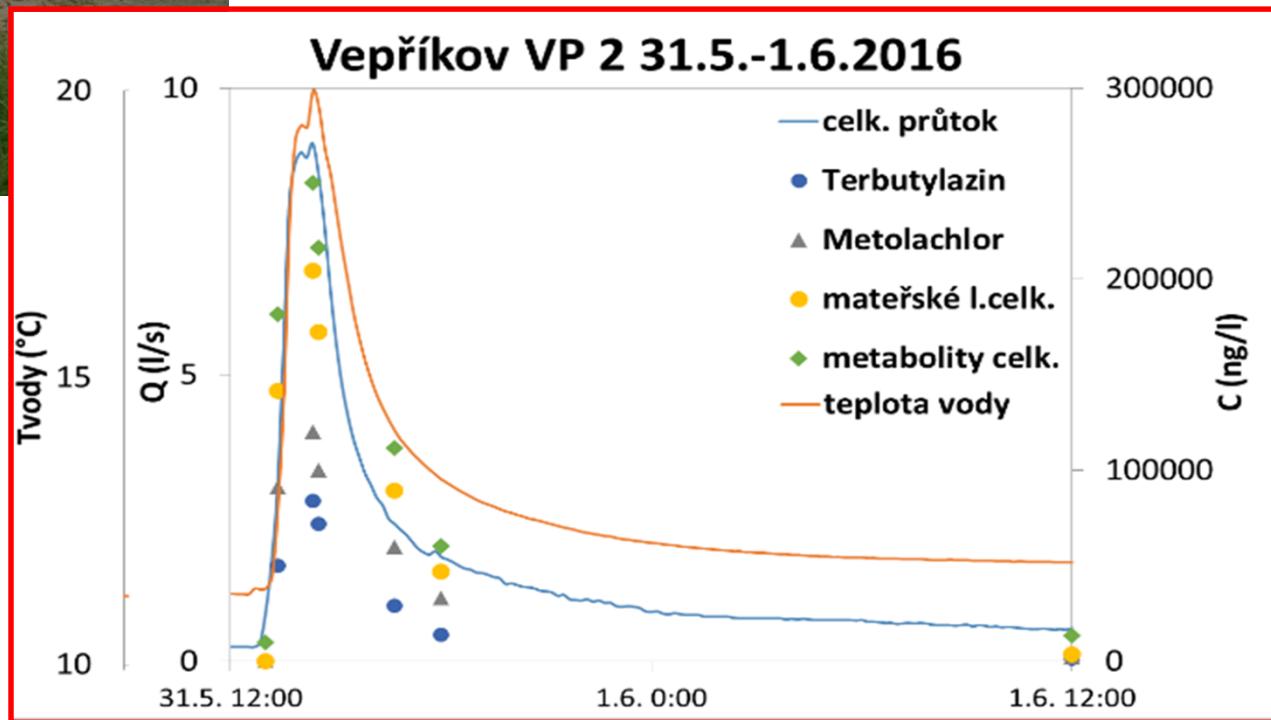

Conditions: arable land, 7 weeks after application, no „new“ water in outflow, increasing concentration of metabolites in outflow

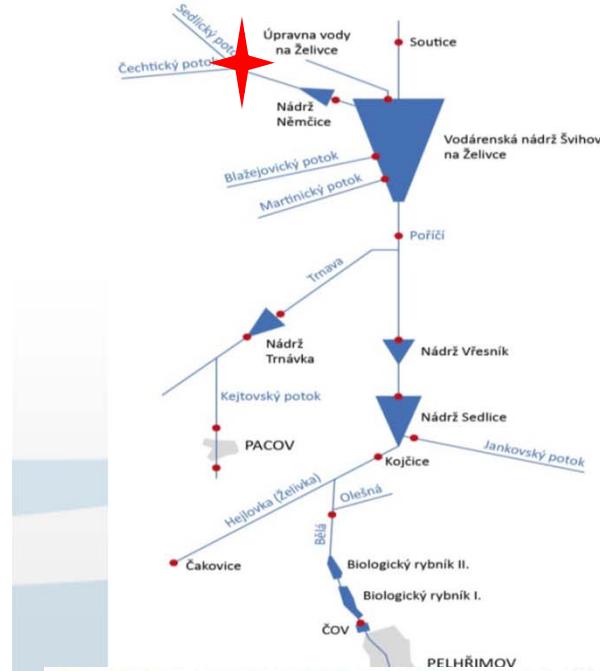

VEPŘÍKOV - CORN

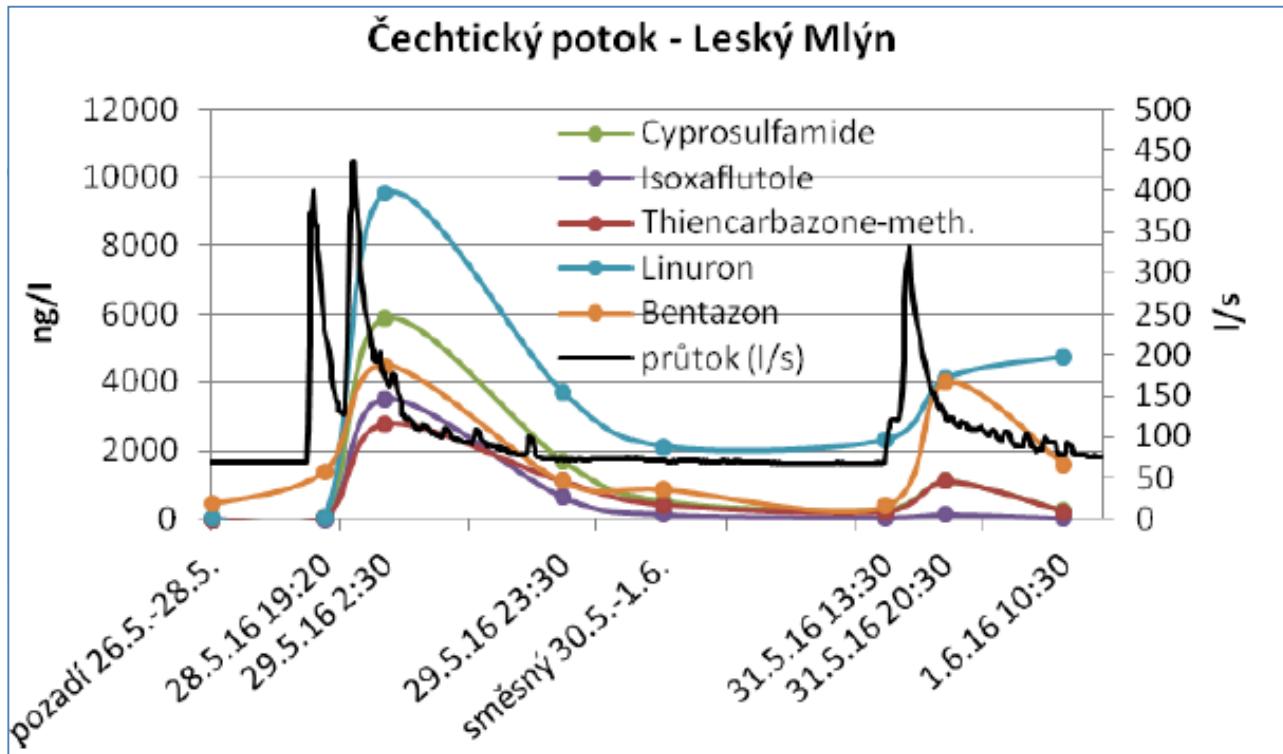

rainfall/runoff events

- Application: 7.5.2016, preemergent application on corn
- Gardoprim Gold dose 4 l/ha; (S-metolachlor 312,5 g/l a Terbuthylazin 187,5 g/l)
- Rainfall event: 20 mm; Q: from 0,25 l/s to 9,0 l/s during 90 minutes
- Runoff of pesticides during 24 h event was 33 g, 14,6 g parent compounds (5,5 g Terbuthylazin a 8,9 g Metolachlor) a 18,4 g metabolites

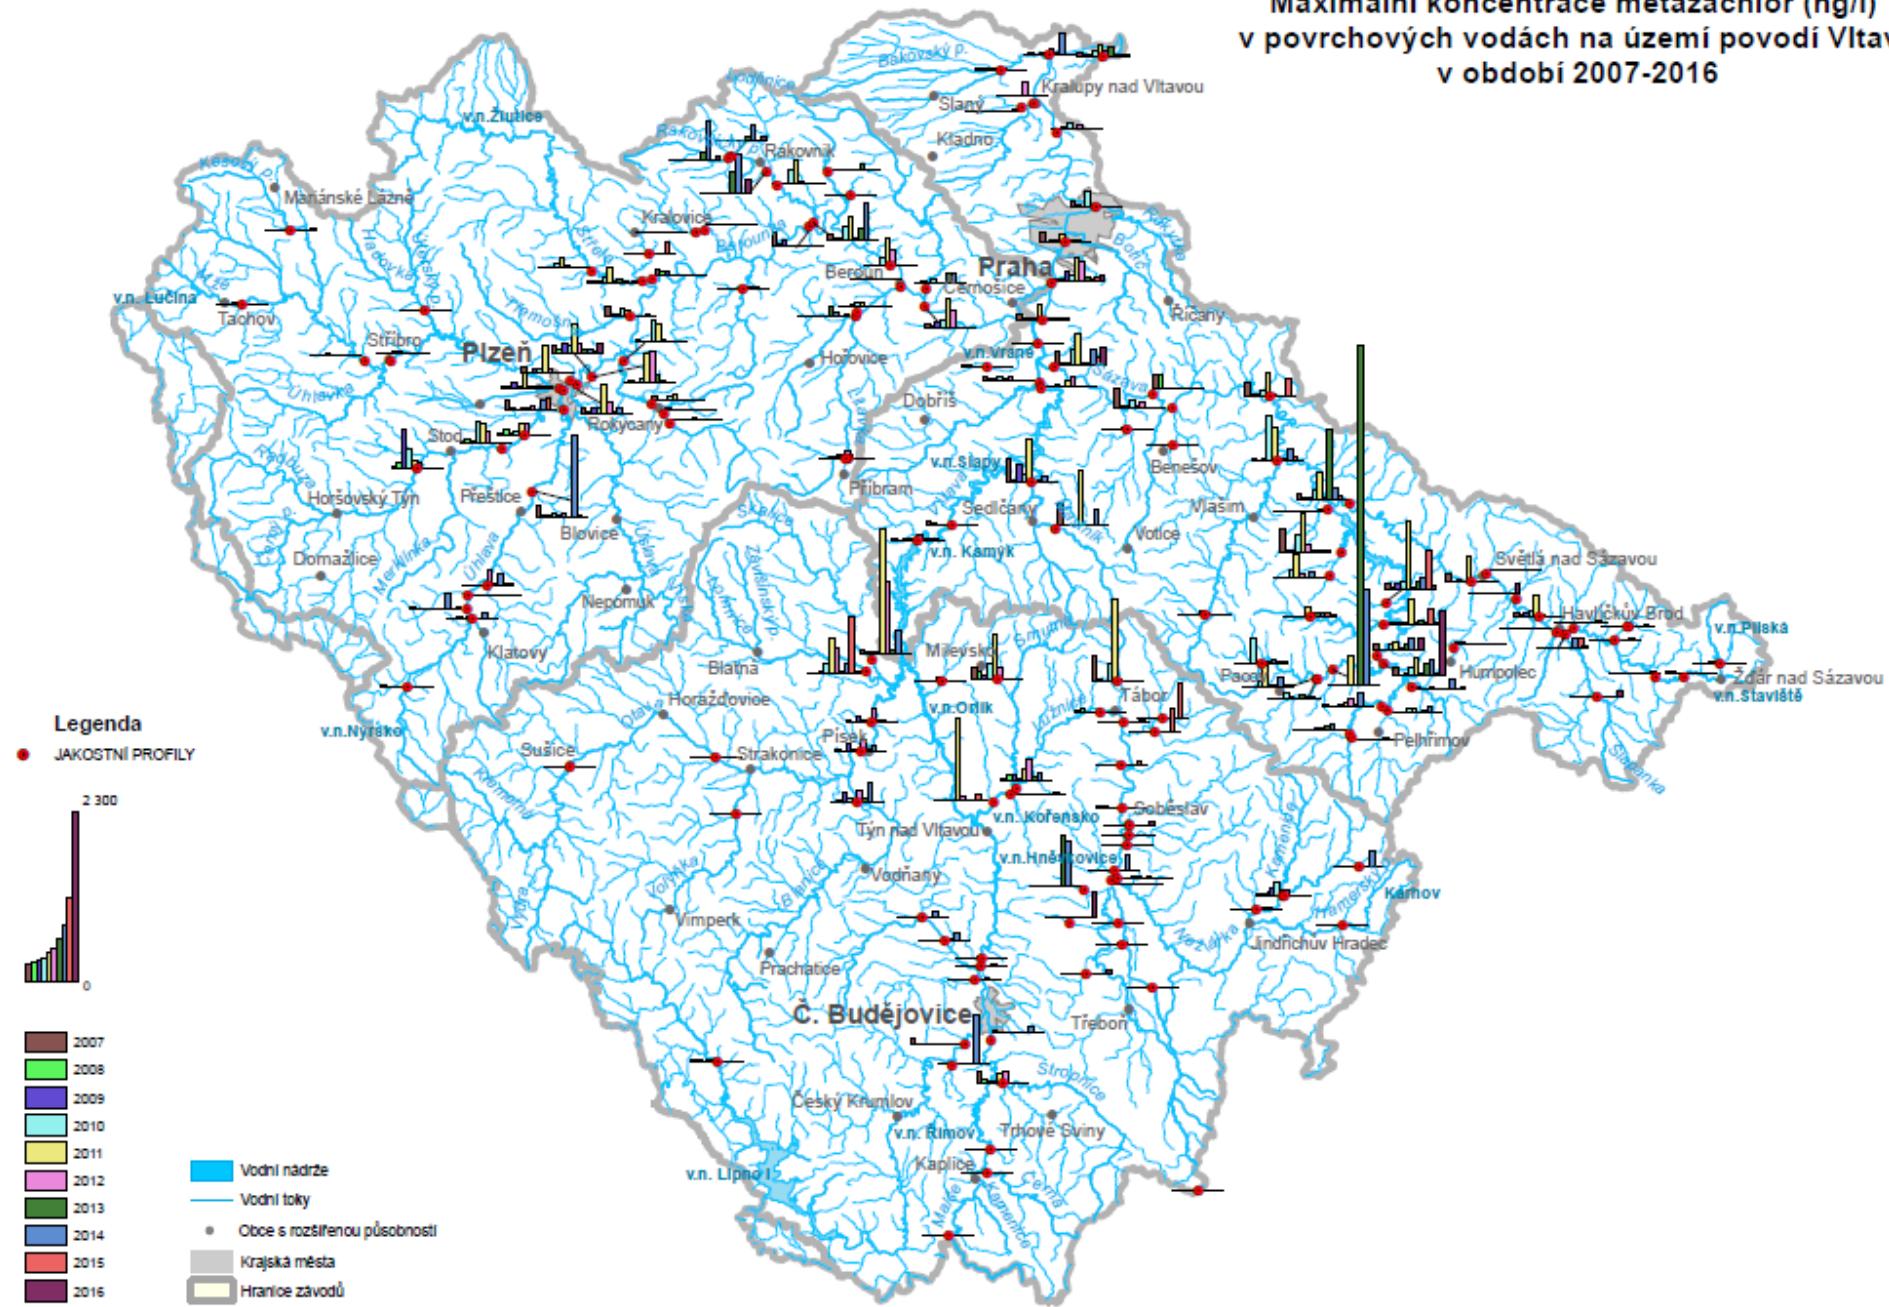

SURFACE WATER – RAINFALL/RUNOFF EVENT

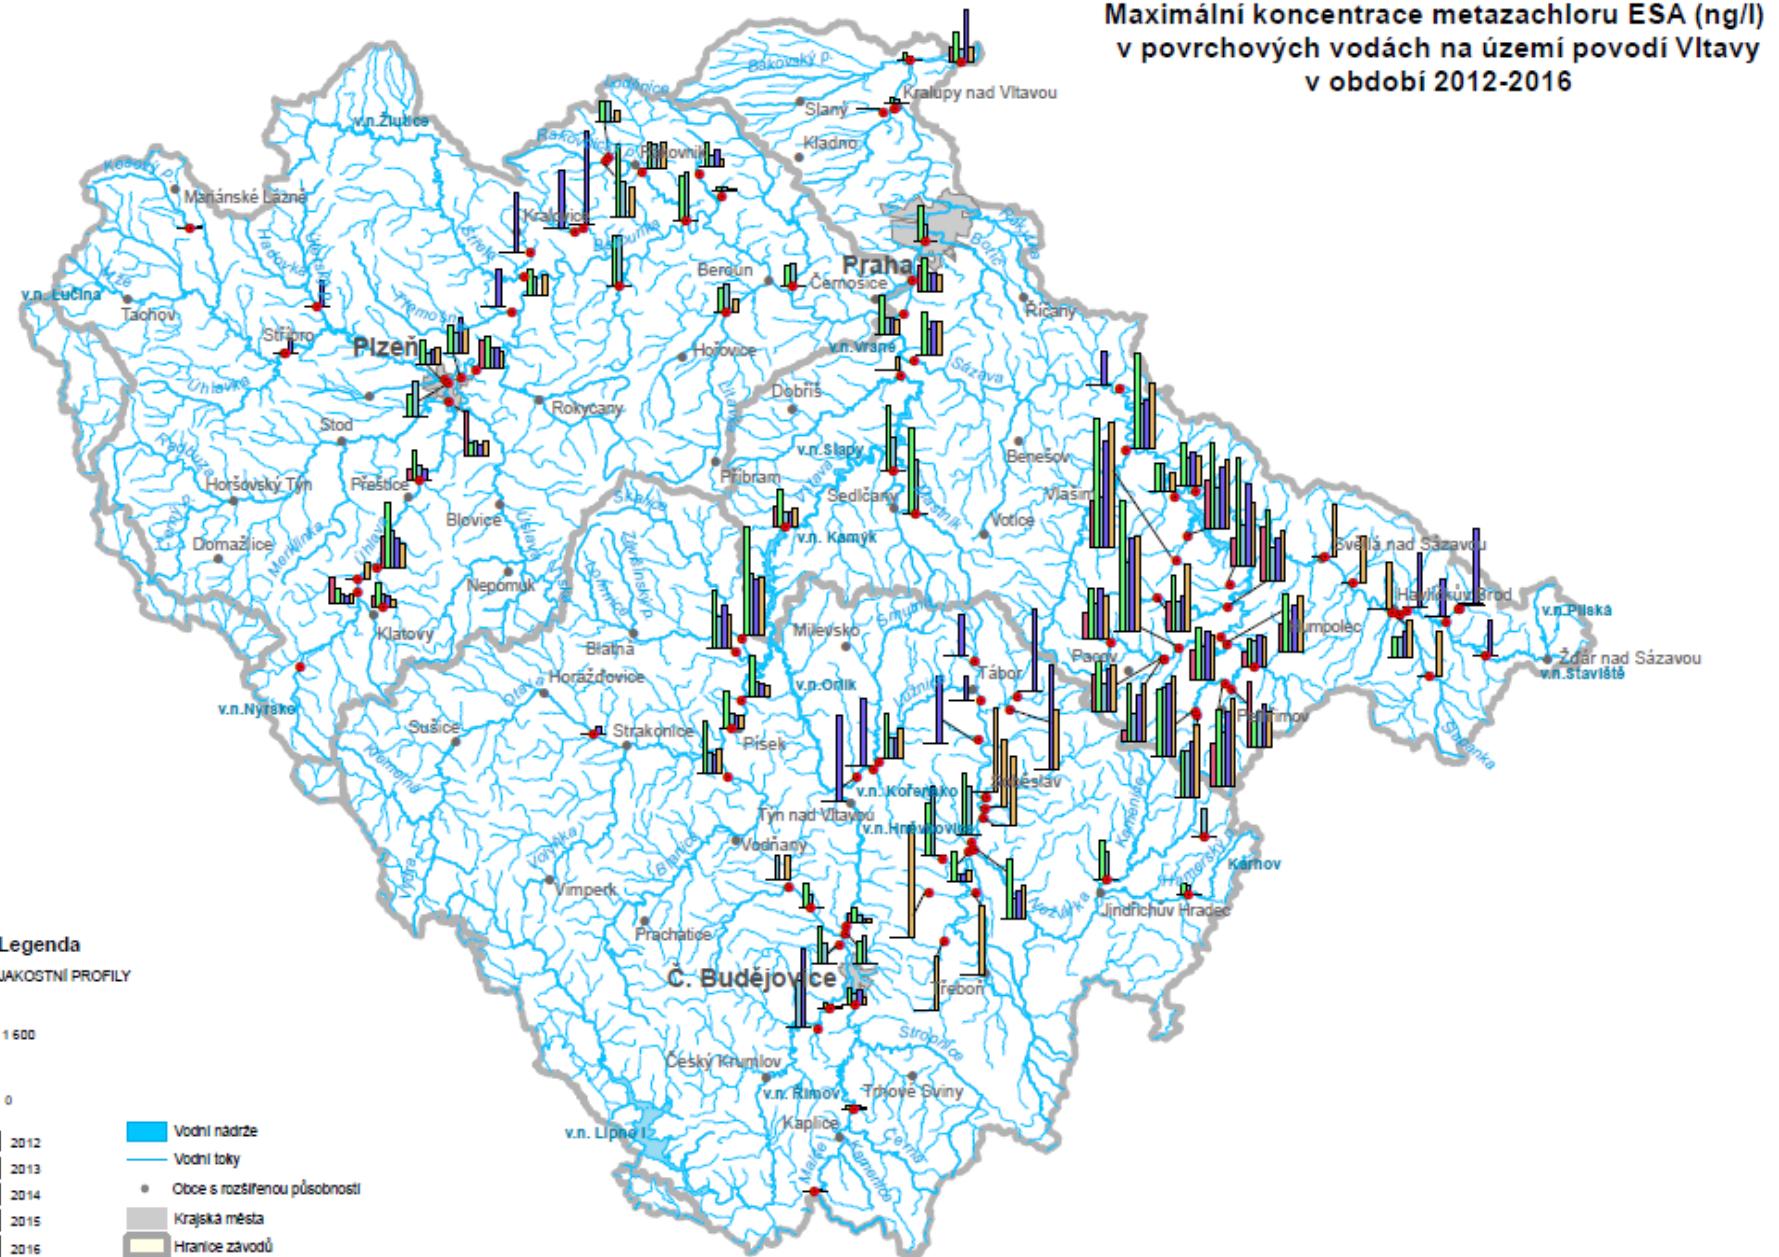

POVODÍ VLTAVY

Metazachlor: max. concentrations 2007-2016

Maximální koncentrace metazachlor (ng/l)
v povrchových vodách na území povodí Vltavy
v období 2007-2016

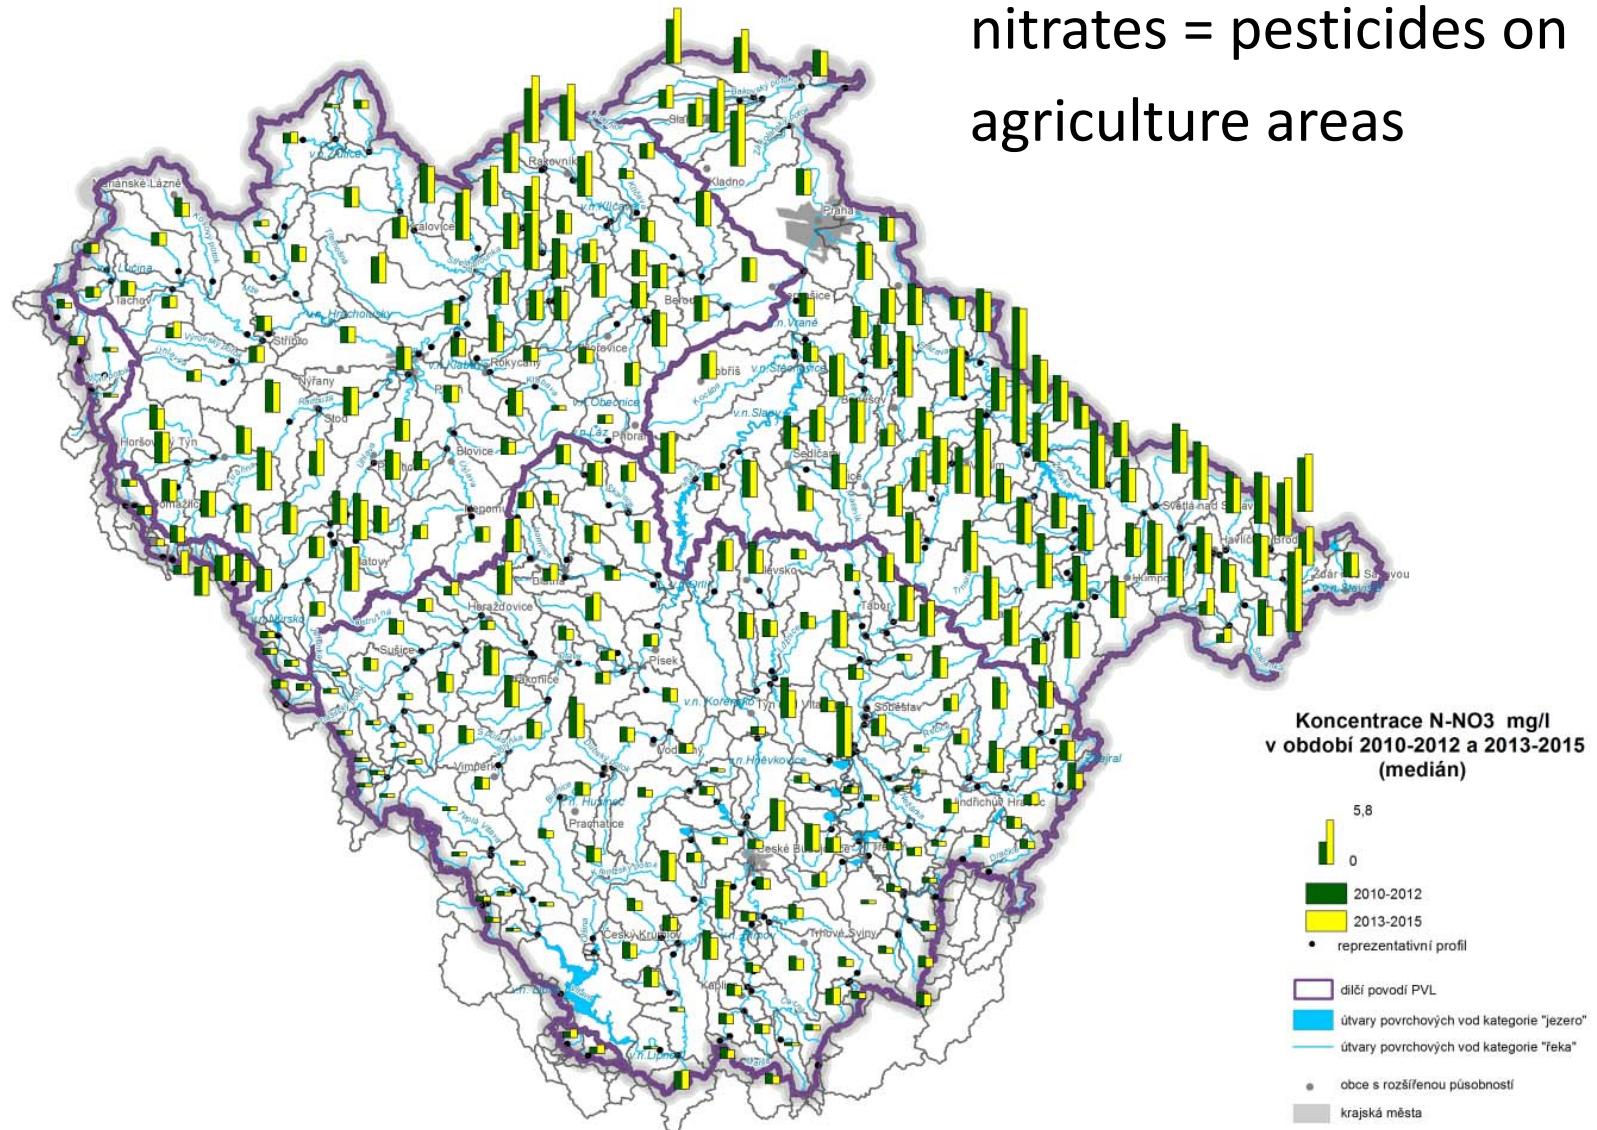

Metazachlor ESA: max. concentrations 2012- 2016

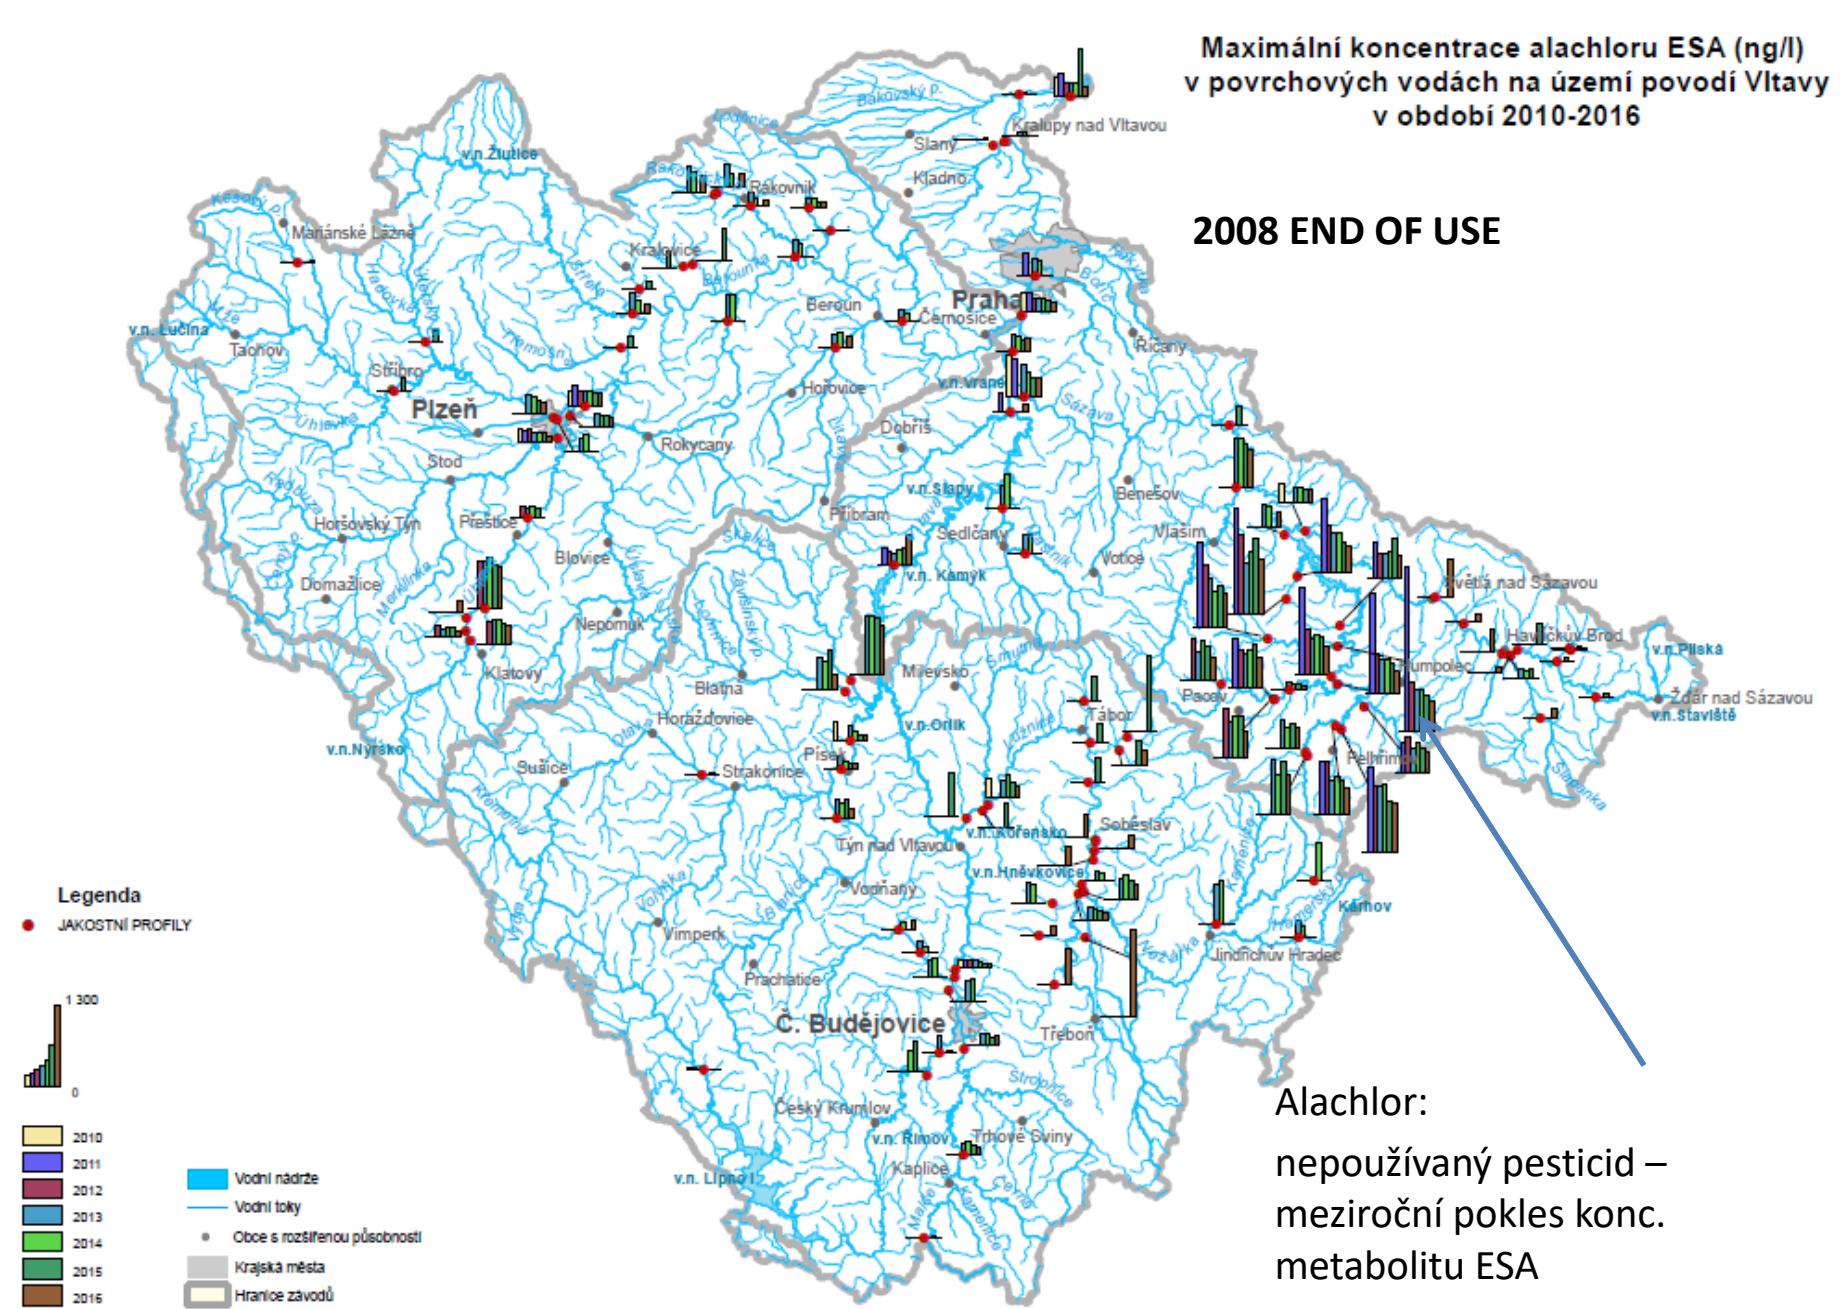

Nitrates: median 2010 – 2012 a 2013 - 2015

nitrates = pesticides on
agriculture areas

Alachlor ESA: max. concentrations 2012 - 2016

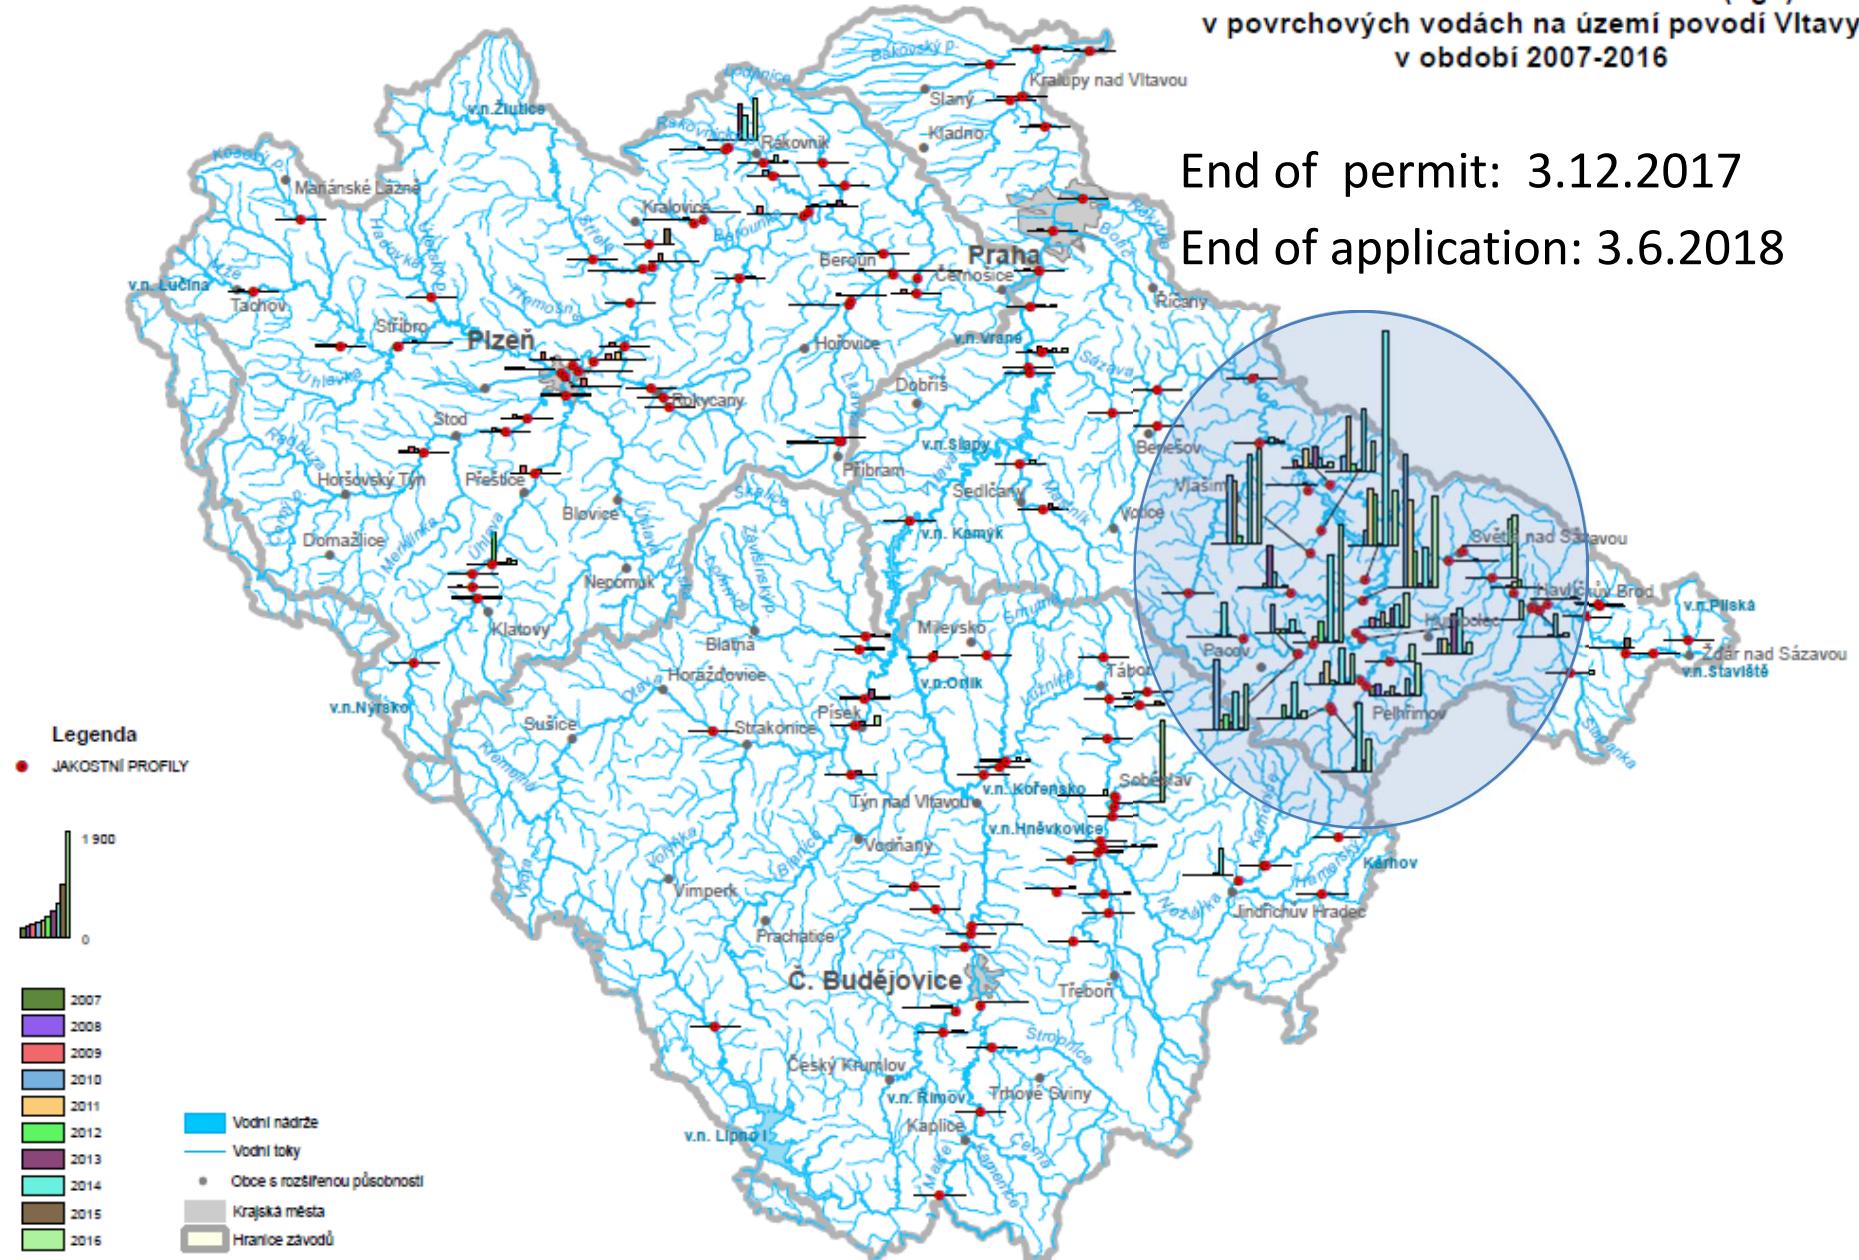

Linuron: max. concentrations 2012 - 2016

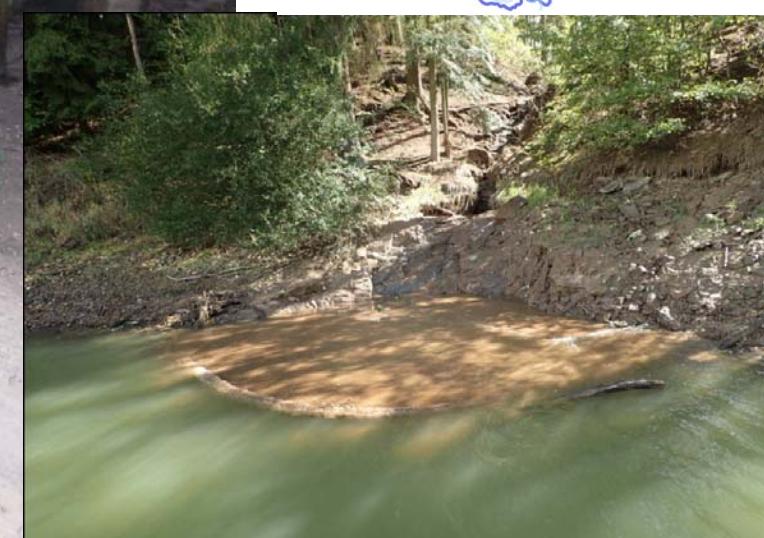

Maximální koncentrace linuronu (ng/l)
v povrchových vodách na území povodí Vltavy
v období 2007-2016

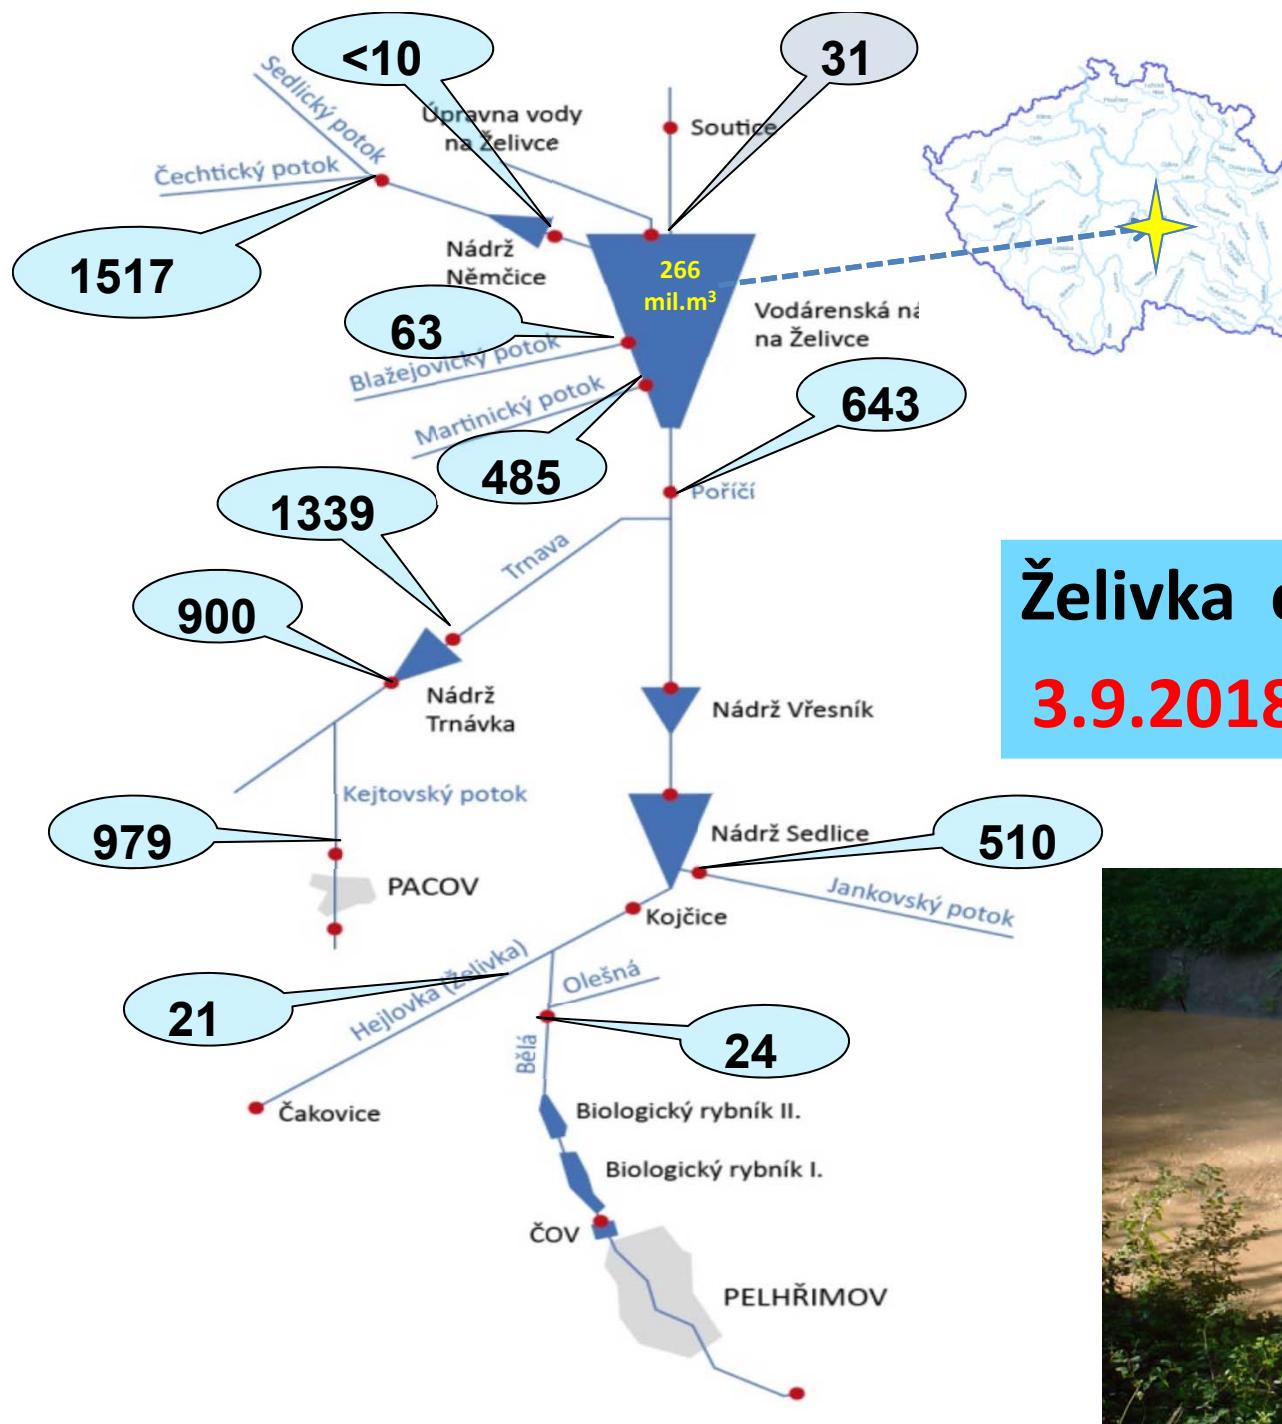

End of permit: 3.12.2017

End of application: 3.6.2018

Autumnal rainfall/runoff events in Švihov reservoir catchment

„autumnal harvest
of pesticides“

3.9.- 4.9.2018

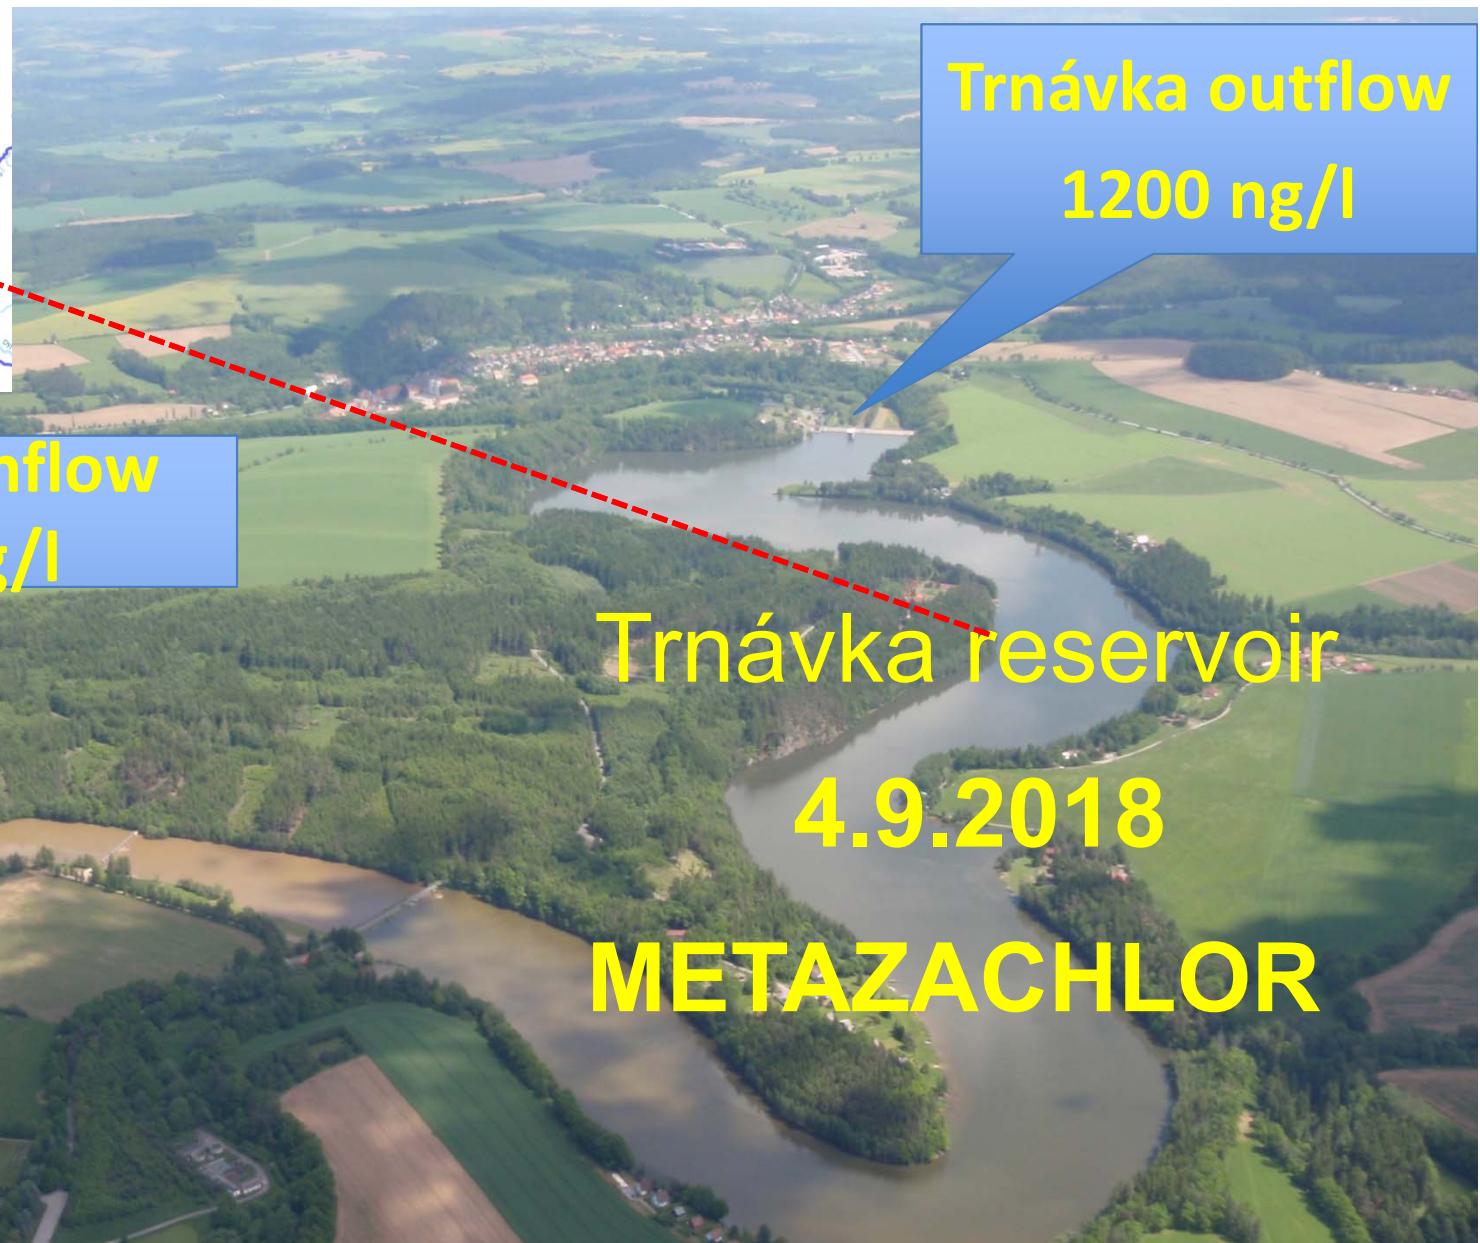

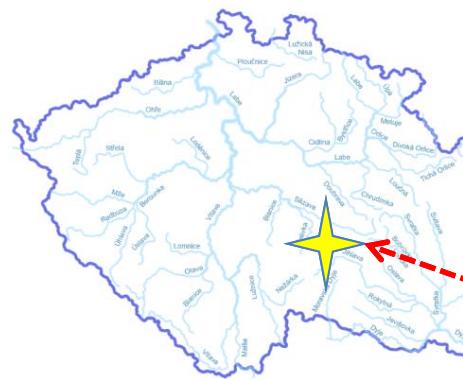

Metazachlor (ng/l)

„after rainfall“

Želivka catchment 1178 km²

3.9.2018 Metazachlor

Trnávka outflow
1200 ng/l

Trnávka inflow
900 ng/l

Trnávka reservoir

4.9.2018

METAZACHLOR

Total water volume in reservoir =cca 1,5 mil m³; by conc. 1000 ng/l it is more than 1kg apl. metazachlor + metabolites in the reservoir

Theoretic example:

Which area was „washed“ to Trnávka reservoir? cca 1,5 ha field of rape
